ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING. THE FINAL TISSUE FORM OF COLLAGEN XII MAY CONTAIN HOMOTRIMERS OF EITHER THE LONGER OR THE SHORTER ISOFORM OR ANY COMBINATION OF LONG AND SHORT ISOFORM CHAINS. ONLY THE LONG VARIANT IS A PROTEOGLYCAN. THE LARGE ISOFORM HAS MORE RESTRICTED EXPRESSION IN EMBRYONIC TISSUE THAN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     STRAIN-WHITE LEGHORN:

Earge and small splice variants of collagen XII: differential
expression and ligand binding.";
J. Cell Biol. 130:1005-1014(1995).
-!- FUNCTION: TYPE XII COLLAGEN INTERACTS WITH TYPE I COLLAGEN-
CONTAINING FIBRILS, THE COLL DOMAIN COULD BE ASSOCIATED WITH THE
SURFACE OF THE FIBRILS, AND THE COLL AND NC3 DOMAINS MAY BE
LOCALIZED IN THE PERIFIBRILLAR MATRIX.
-!- SUBJUNIT: TRIMER OF IDENTICAL CHAINS EACH CONTAINING 190 KDa OF
NONTRIPLE-HELICAL SEQUENCES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE OF 1-1283 FROM N.A.      C -1- TISSUE SPECIFICITY: TYPE XII COLLAGEN IS PRESENT IN TENDONS,
LIGAMENTS, PERICHONDRIUM, AND PERIOSTEUM, ALL DENSE CONNECTIVE
TISSUES CONTAINING TYPE I COLLAGEN.
C -1- DOMAIN: THIS SEQUENCE DEFINES FLUE DISTINCT DOMAINS, TWO TRIPLE-
HELICAL DOMAINS (COLLAND COL2) AND THREE NONTRIPLE-HELICAL
DOMAINS (NIL, NC2, AND NC3).
C -1- PTM: THE TRIPLE-HELICAL TAIL IS STABILIZED BY DISULFIDE BONDS AT
EACH END.
C -1- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
C -1- PTM: GLYCOSYLATED, CHONDROITIN-SULFATED (BY SIMILARITY).
C -1- PTM: GLYCOSYLATED, CHONDROITIN-SULFATED (BY SIMILARITY).
C -1- PTM: GLYCOSYLATED, CHONDROITIN-SULFATED (BY SIMILARITY).
C -1- SIMILARITY: CONTAINS 18 FIBRIL-ASSOCIATED COLLAGENS WITH
INTERRUPTED HELICES (FACITY) FAMILS.
C -1- SIMILARITY: CONTAINS 18 FIBRONECTIN TYPE III-LIKE DOMAINS.
C -1- SIMILARITY: CONTAINS 18 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COLLAGEN ALPHA 1(XII) CHAIN. FIBRONECTIN TYPE-III 1.

Lev. Dyn. 204:432-445(1995).

Lev. Dyn. 204:432-445(1995).

Lev. Dyn. 204:432-445(1995).

CONTAINING FIBRILS, THE COLL DGNAIN COULD BE ASSOCIATED WITH THE CONTAINING TIBRILS, AND THE COLZ AND NG3 DOMAINS MAY BE COLALIZED IN THE PERRIFIBALLER MATRIX (BY SIMILARITY).

LOCALIZED IN THE PERRIFIBALLER MATRIX (BY SIMILARITY).

LOCALIZED IN THE PERRIFIBALLER MATRIX (BY SIMILARITY).

LOCALIZED IN THE PERRIFIBALIZE BY SIMILARITY).

LOCALIZED IN THE PRODUCED BY ALTERNATIVE SPLICING. THE FIRAL TISSUE SOME THE SHORTER ISOFORM OR ANY COMBINATION OF LONG AND SHORT ISOFORM CHAINS. ONLY THE LONG VARIANT IS A PROTECCHIVCAN.

LISOFORM CHAINS. ONLY THE LONG VARIANT IS A PROTECCHIVCAN.

SKIN, CORNEA, SCLERA, BLOOD VESSELS, AND PERIOSTEUM.

CHEDOMENTAL STAGE: LONG FORM OF COLLAGEN XII, XIIA, IS THE STAGES (EDT AND THE SHORT FORM, XIIB, BECOMES THE MAJOR PRODUCT, THE LONG SPLICE FORM. AS THE SHORT FORM BECOMES THE MAJOR PRODUCT, THE LONG SPLICE FORM.

CHARLES THE SHORT FORM BECOMES THE MAJOR PRODUCT, THE LONG SPLICE FORM.
 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
 PTM: THE TRIPLE-HELICAL TAIL IS STABILIZED BY DISULFIDE BONDS AT EACH END (BY SIMILARITY).

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS (BY
 SEQUENCE FROM N.A., AND ALTERNATIVE SPLICING.

Biol. Chem. 265:19040-19046(1990).

J. Biol. Chem. 265:19040-19046(1990).

THE COMPLEMENT SYSTEM IS CLEAVED BY ACTIVATED FACTOR C1 INTO TWO FRAGMENTS: C2B AND C2A. C2A. C2A. A SENINE PROTEASE, THEN COMPLENDENT FACTOR 4B TO GENERATE THE C3 OR C5 CONVERTASE.

COMPLEMENT FACTOR 4B TO GENERATE THE C3 OR C5 CONVERTASE.

CATALYTIC ACTIVITY: CLEAVES C3 IN THE ALPHA-CHAIN TO YIELD C3A AND C5B. BOTH CLEAVES C5 IN THE ALPHA-CHAIN TO VIELD C3A AND C5B. BOTH CLEAVES C5 IN THE ALPHA-CHAIN TO VIELD C3A AND C5B. BOTH CLEAVES C5 IN THE ALPHA-CHAIN TO VIELD C5A AND C5B. BOTH CLEAVES C5 IN THE C-TERMINAL OF AN ARGININE RESIDUE.

                                                                                                                                                                                                                             * NOTE: This record contains 94 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9421

```

```
* sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

It currently consists of 45 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N but the exact sizes of the apps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
